

Optimize Your Fleet Management.

Terberg Connect is our telematics solution that always offers you full transparency across your entire fleet. Use your data to always keep your fleet management up to date.

Fleet Management at a glance

The Terberg Connect Manager supports you in improving efficiency and monitoring your fleet with daily updated vehicle operating data. You gain insight into operating and idling hours, distances traveled, fuel consumption, CAN bus data and many other records.

Maintenance with one click

Upcoming maintenance based on operating hours and legally required tests such as the Workplace Health & Safety Inspection can be conveniently planned with a predefined service reminder.

Prevent defects in your fleet and simplify the maintenance process. Vehicle notifications and error codes help us provide you with a solution remotely.

Functions

Service Module

Proactive maintenance of your fleet.

Real-time Geolocation

Precise visual determination of vehicle location.

Diagnostics

View the CAN bus data and error messages.

Alarm Module

Geofencing as theft protection for more security.

Data Reports

Preparation and planning of various reports.

User Management

Add and manage additional access.

Mobile Access

Vehicle fleet control at any time and from anywhere.

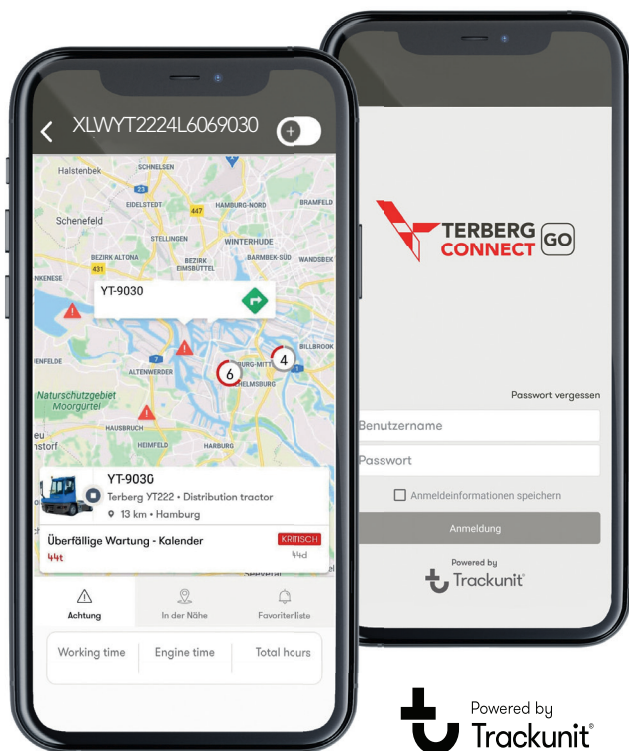

Retrofit Solution

Uncomplicated retrofit solution for Terberg models*.

Installation

In order to use Terberg Connect, the telematics unit is permanently installed in your vehicle. The unit's GPS receiver is connected to the Internet through a mobile connection and transmits the location and usage data to the fleet management system.

The telematics unit is robust and versatile and has a variety of inputs and outputs for the most demanding applications via CAN bus interface.

User-friendly Apps

So that you can access the data from the Terberg Connect Manager at any time and from anywhere, we offer you our mobile access solution Terberg Connect Go and Terberg Connect On.

Terberg Connect Go is primarily used by fleet operators and technicians. Through accurate and careful vehicle monitoring and intelligent notifications about maintenance, inspections and damage, Terberg Connect Go helps to proactively schedule maintenance and counteract unwanted downtime.

Terberg Connect On is the digital assistant for drivers. Communication between the driver, technician and fleet manager is simplified because damage can be reported via the app as an image or comment so that it can be remedied as quickly as possible.
